## Mono-n-octyl phthalate

CAS No. 5393-19-1

Metabolite of dioctyl phthalate (CAS No. 117-84-0)

Dioctyl phthalate is used primarily to produce flexible plastics. People exposed to dioctyl phthalate will excrete mono-n-octyl phthalate in their urine. The amount of mono-n-octyl phthalate is an indicator of how much contact with dioctyl phthalate has occurred.

Workplace air standards for external exposure are established (OSHA) for dioctyl phthalate. Generally, dioctyl phthalate has low acute toxicity. It has not been completely classified with respect to its carcinogenicity

(U.S. EPA, IARC, NTP). Information on external exposure and health effects is available from ATSDR at http://www.atsdr.cdc.gov/toxprofiles.

Concentrations documented in this *Report* are close to the detection limit. In a previous study of a non-random subsample from NHANES III, Blount et al. (2000) also demonstrated a low detection rate (0.9 µg/L detection limit) and 95<sup>th</sup> percentile levels similar to this *Report*.

<sup>\*</sup> Not calculated. Proportion of results below limit of detection was too high to provide a valid result.
